Module Description

The goal of instruction on drug/poison information is to prepare the student to serve as an effective provider of drug information. An effective provider perceives, assesses and evaluates drug information needs, and retrieves, evaluates, communicates and applies data from the published literature and other sources as an integral component of pharmaceutical care. This function will be achieved through the completion of didactic and experiential courses as well as direct patient care experiences. This course provides crucial information in the preparation of the students for subsequent drug-based knowledge.
