Module Description

This course deals with the basic components of the medical terms (roots, prefixes, suffixes, and linking or combining vowels) and how does the medical terminology work by combining these basic components.

The course also includes the commonly used prefixes, suffixes and roots of the body systems, as well as the commonly used medical abbreviations and diseases.

In addition, the student will have the ability to understand and utilize medical/pharmacy terms commonly used in patient care delivery and pharmacy practice. Emphasis is placed on root-words and affixes which have general and frequent occurrence in the communication of medicine, pharmacy, chemistry, and related areas.
