Module Description

This is the last course of basic pharmacology. It deals with the principles of chemotherapy of microbial diseases, neoplastic diseases and parasitic infestations with emphasis on the properties of drugs and the patient factors that influence of the therapeutic events. A part of the course is devoted to endocrine disorders, and drugs used in their treatments. The course also introduces aspects of adverse drug reactions, their types, mechanisms and hazards, as well as drug-drug interactions and their consequences, and altered drug responsiveness in special populations.
